BITCOIN

Bitcoin (BTC) is the most famous cryptocurrency in the world, it is also the very first cryptocurrency. The system on which the project is built is 100% decentralised and serves users for direct transactions without intermediaries in the form of banks, payment services and other financial institutions. This system has transformed monetary transactions, making transactions faster cheaper and more transparent. At the project's inception, 1 BTC was worth less than 1 cent, and in 2021 it broke through the \$64,000+ ceiling.

WHAT'S THE VALUE OF BTC?

- 1** First cryptocurrency.
Following its example, thousands of other coins were then created and dozens of blockchains were launched.
- 2** You can't generate other coins on the Bitcoin blockchain like you can on Ethereum.
Highly liquid cryptocurrency. BTC trades in tandem with 99% of the coins that are available on exchanges (by this measure, it outperforms other coins).
- 3** The change in the BTC rate affects the state of the entire market.
If its price decreases, there is a drop in the value of most other coins as well. This is due to the fact that it is the main pair on exchanges and the most popular cryptocurrency among investors.
- 4** The coin is accepted by large companies, corporations, websites, marketplaces and apps, of which there are over 100,000 as of August 2023
(Microsoft, KFC, eBay, Amazon and others). The list is constantly expanding. BTC is the leading means of payment when compared to other cryptocurrencies.
- 5** Limited number of coins.
The maximum amount that can be generated is 21 million BTC. The limited issuance should prevent inflation and depreciation, as well as incentivise miners to allocate computing power to support the network.

HALVING BITCOIN

The bearish trend in the cryptocurrency market has been going on for almost two years. In the spring of 2024, the bitcoin network will see its fourth halving. Because of this, many experts and participants in the cryptocurrency community have traditionally expected a bull market.

Halving is a reduction by half of the reward to miners for adding a new block to the chain. Bitcoin is programmed to halve every 210,000 blocks - every four years until 2140, when the asset's issuance reaches 21 million BTC.

Besides halving, the crypto community sees other potential drivers of bitcoin's growth - such as the US Securities and Exchange Commission's (SEC) approval of an exchange traded fund (ETF) based on the spot price of the first cryptocurrency. We've gathered industry opinions on the growth prospects of the first cryptocurrency amid an important development for its development.

TECHNICAL ANALYSIS OF BTC/USD

Historically, cryptocurrencies are prone to very deep corrections relative to their previous rise, more than 61.8% or even more than 78.6% of the previous upward movement (the 61.8% and 78.6% levels are considered classic retracement levels in chart analysis and are called Fibonacci retracement). Such deep corrections can be seen in both 2016 and 2017, and the two-year correction from the beginning of 2018, gave investors the opportunity to earn hundreds of per cent gains in just one year.

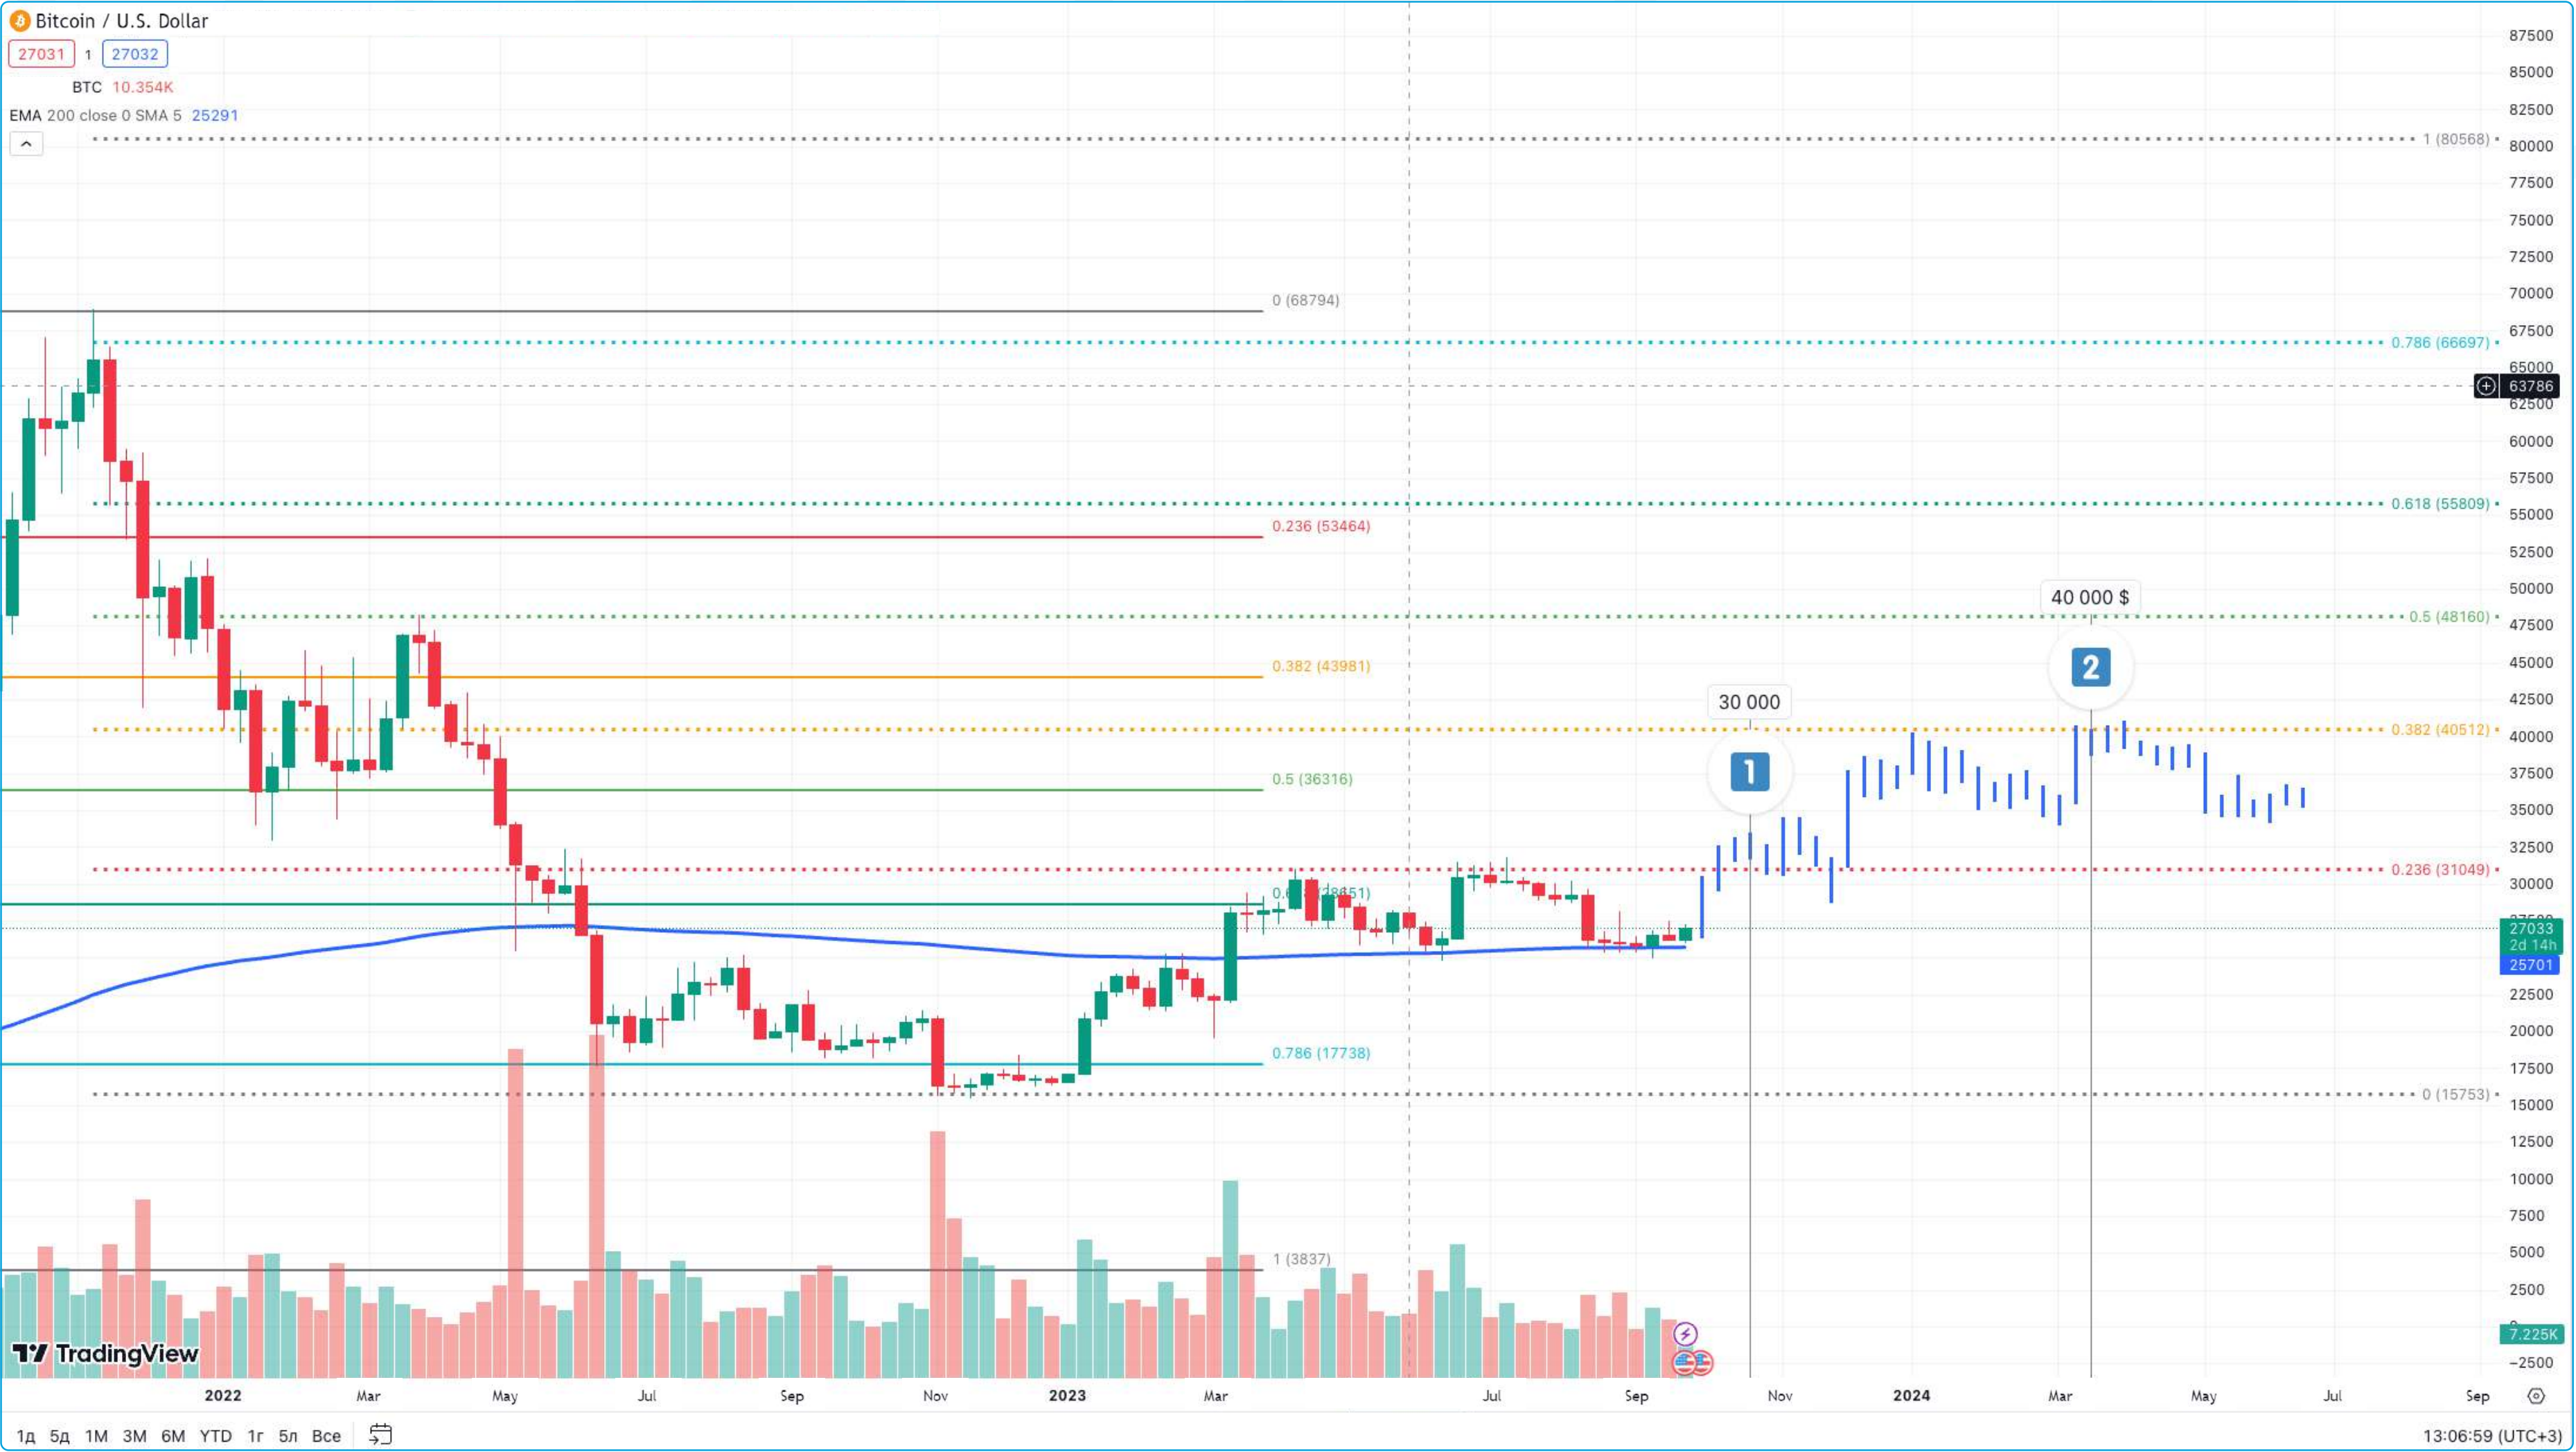

AT THE MOMENT BTC IS IN A STRONG UPTREND AND WE CAN TALK ABOUT THE COMPLETED CORRECTION.

In November 2022, the Asset showed a low point of \$15,730 which is a Fibonacci retracement level of 78.6% of the total growth of the asset. Using Fibonacci retracement we have identified growth targets for the asset — 23.6% — \$31,049 — which was achieved in July 2023 and 38.2% — \$40,512 which is the next growth target.

A few additional factors to the positive outlook:

- ✓ Steady upward channel
- ✓ Asset trades above 200-day exponential average
- ✓ First level of Fibonacci retracement confirmed

TECHNICAL ANALYSIS OF BTC/USD

FORECAST ON BITCOIN

Taking into account all factors formed on the market analysts of the company assume the **growth of the asset in the region of \$40,000 by the end of 2023**. Further dynamics will be shown to us by the Fundamental background of the asset. With BTC now trading around \$27,000 the return could be 48%. But the appealing thing about this story is that it's not the limit.

Blockstream CEO Adam Back: \$100,000

The head of blockchain developer Blockstream, Adam Back, predicted Bitcoin would rise to \$100,000 even before the halving. He even bet 0.01 BTC on this outcome until 31 March 2024.

CONCLUSION

With Invest Start, your investment in Bitcoin (BTC) is as safe as can be. Don't miss out on opportunities like this.

Invest with no risk.
